

Diane Butterworth | BIM Collaboration

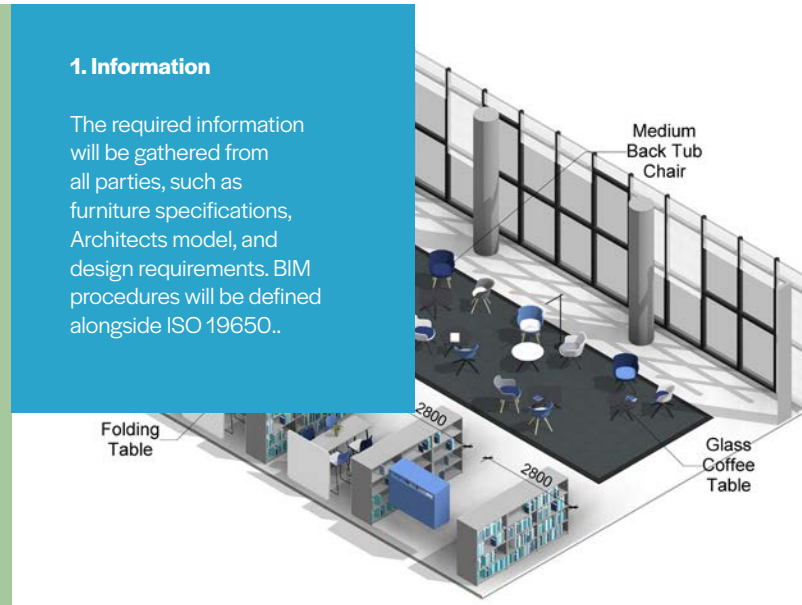

Swift turnaround for workspace and furnishing projects.

You don't need to call in the architectural heavy hitters – we provide the agile and responsive BIM services you need to work in a Common Data Environment (CDE).

1. Information

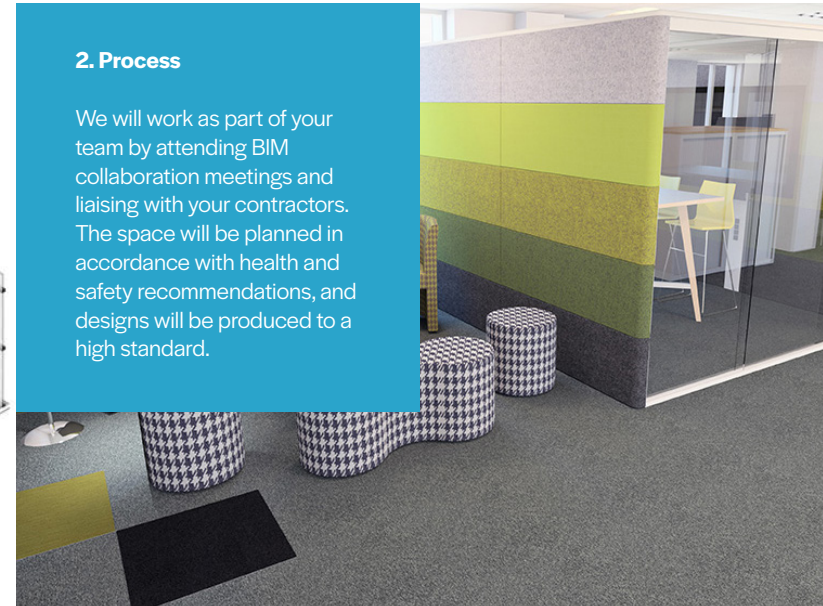

The required information will be gathered from all parties, such as furniture specifications, Architects model, and design requirements. BIM procedures will be defined alongside ISO 19650..

Folding Table

2. Process

We will work as part of your team by attending BIM collaboration meetings and liaising with your contractors. The space will be planned in accordance with health and safety recommendations, and designs will be produced to a high standard.

3. Upload

Using the digital replica, we will provide 2D layouts, up-to-date schedules, 3D visuals, and required elevation views. These documents assist with product quotations, design reviews and onsite installation. All documents will be uploaded to the CDE throughout the project process.

Have you been asked to provide evidence of your BIM capability to secure a project?

Are you working alongside architects and require experience working within a common data environment (CDE)?

“Having access to a team with the skills and knowledge of creating a BIM model was essential to us initially securing the furniture contract with Keir Construction.”

Adam Smith – Head of Sales at Morley’s Office Furniture

- ✓ BIM execution plan deliverable support (BEP)
- ✓ Revit Family creation
- ✓ Product scheduling
- ✓ Material takeoff schedule
- ✓ COBie deliverables
