

Diane Butterworth | Walkthroughs and Flyovers

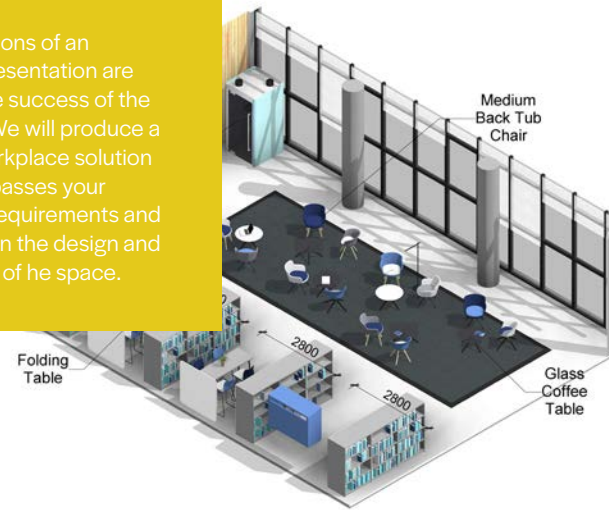

Do you want to wow your customer with an interactive presentation?

Do you need an additional tool to improve the communication of a design of your customer's new office space?

Walkthroughs and flyovers provide a 3D predefined path that customers can view from any digital device, allowing them to immerse themselves into their future environment before investment.

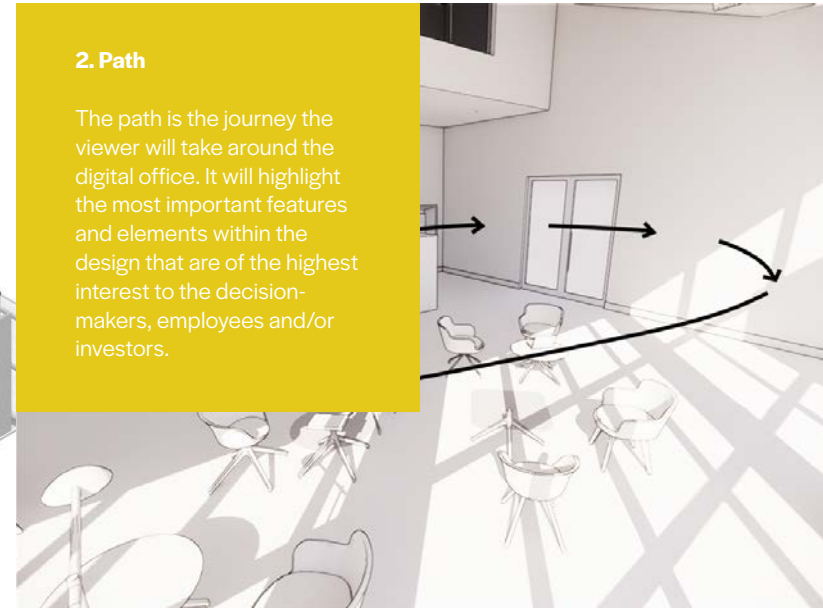

1. Space Plan and Design

The foundations of an animated presentation are crucial to the success of the final video. We will produce a practical workplace solution that encompasses your company's requirements and brand, both in the design and functionality of the space.

2. Path

The path is the journey the viewer will take around the digital office. It will highlight the most important features and elements within the design that are of the highest interest to the decision-makers, employees and/or investors.

3. Present

Using video editing software, we can overlay elements; such as voice-over, images, and annotations; so that all parties are supplied with the same relevant project information. This digital presentation can be shared via email and viewed on any portable device or presented on a screen.

Adding impact to your visualisations

Add the 'wow' factor with an interactive presentation, using any digital device to taking viewers on a 3D journey of their future environment.

“They have always provided a swift and effective turnaround and are always accommodating and professional in their approach. Their service has become an essential part of our design and presentation process.”

Jason Martin, Design Consultant at Gravity Office Interiors

- ✓ Space planning and design service
