

Diane Butterworth | Revit Families

High quality digital modelling for your products.

Forget generic digital models, you can now have your own Revit family created by us, the UK's leading provider. Perfect for compliance, BIM and meeting tender requirements.

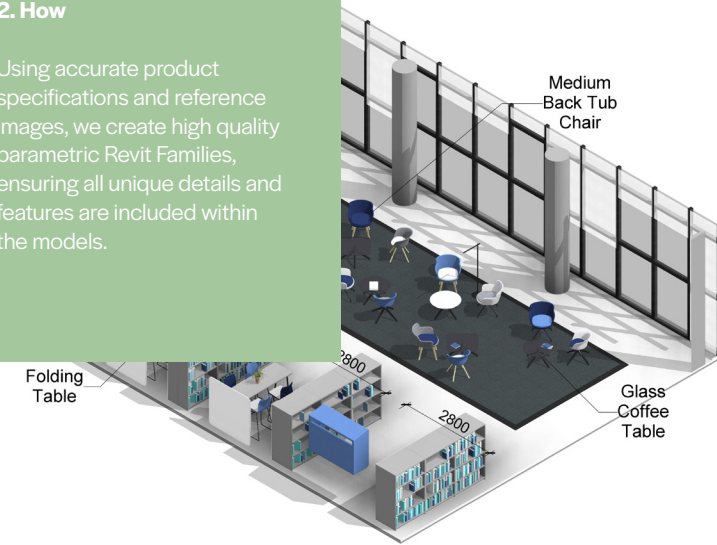

1. Why

A digital catalogue gives designers and architects the flexibility of parametric files, provides sales staff with accurate scheduling, and installation teams access to up to date drawings.

2. How

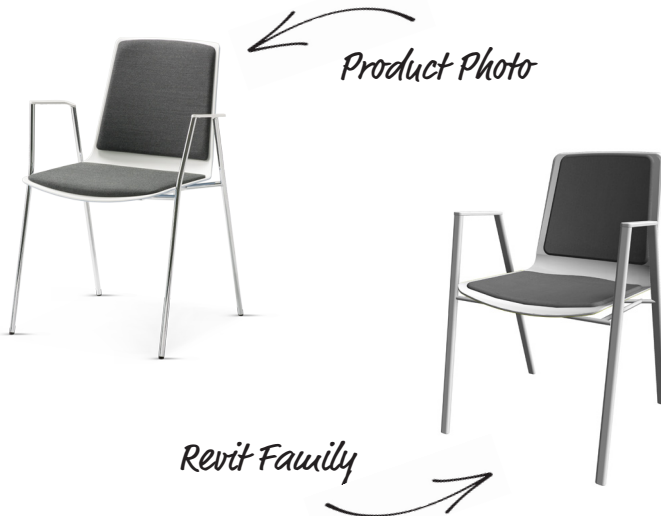

Using accurate product specifications and reference images, we create high quality parametric Revit Families, ensuring all unique details and features are included within the models.

3. Result

Stunning scenes and product renders can be produced quickly within Revit Architecture.

Hidden beneath the model is a digital footprint of the product, relevant NBS data, and your company's credentials; all of which remain within the product throughout its life.

Do you frequently receive enquires for Revit Families as part of a tender requirement?

BIM is the construction industry going digital and it is essential for manufacturers to support this movement to prevent loss of sales and to maintain high government standards.

“I have received great feedback regarding the quality of the models and believe these have given us a competitive edge amongst other suppliers.”

Jeff Roberts, Finance Director at Verco Office Furniture Ltd

- ✓ High quality modelling
- ✓ Industry standard data
- ✓ Parametric files
- ✓ Material libraries
- ✓ Augmented Reality ready

- ✓ Bespoke Level of Detail
- ✓ 2D symbol
- ✓ Low file size
- ✓ Digital catalogue
- ✓ Be spec'd early
